This final degree project has analyzed deeply the evolution that the service sector-tertiary sector has suffered in our modern society. The work is particularly focused in the sanitary service, contrasting the public sanitary service and the private one, taking Spain and the USA as an example of where both services are working right now, respectively. Once they are explained, we have studied the different factors that are taken into account when a public or private hospital has to be located in one place or another.

The document also displays the resolution to a problem that the province of Castellón undergoes when raising a new hospital complex. Finally, the posed subject is solved and the results are explained, as well as the conclusions.

1. FACILITIES LOCATION 2. SANITARY SERVICE 3. HUFF’S AND REILLY’S MODELS
