Thermally-Induced Structural Transitions between Single-Crystalline States in the First Hybrid Compound Combining Keggin-Type Clusters with Metal-Cyclam Complexes: From 2-Dimensional Covalent Assemblies to Discrete Molecular Species

Leticia Fernández-Navarro,[‡] Amaia Iturrospe,[‡] Santiago Reinoso,[§] Beñat Artetxe,^{*,‡} Estibaliz Ruiz-Bilbao,[‡] Leire San Felices,^{||} and Juan M. Gutiérrez-Zorrilla^{*,†,‡}

TABLE OF CONTENTS

Figure S1. FT–IR spectrum of 1 . Positions and assignments for the most significant signals are provided.	2
Figure S2. FT –IR spectra of compound 1 obtained from [SiW ₁₂ O ₄₀] ⁴⁻ (SiW ₁₂), [SiW ₁₁ O ₃₉] ⁸⁻ (SiW ₁₁) and [SiW ₉ O ₃₄] ¹²⁻ (SiW ₉) POM precursors and their comparison with the spectrum of the plenary Keggin anion [SiW ₁₂ O ₄₀] ⁴⁻	3
Figure S3. Comparison between the experimental powder X–ray diffraction patterns of 1 obtained from [SiW ₁₂ O ₄₀] ⁴⁻ (SiW ₁₂), [SiW ₁₁ O ₃₉] ⁸⁻ (SiW ₁₁) and [SiW ₉ O ₃₄] ¹²⁻ (SiW ₉) POM precursors and that simulated from single–crystal X–ray diffraction data.....	4
Figure S4. TGA (blue) and DTA (pink) curves of compound 1	4
Figure S5. Comparison between the experimental powder X–ray diffraction pattern of 1 at 30 °C and that simulated from single–crystal X–ray diffraction data.	5
Figure S6. Identification of the final residue from the thermal decomposition of 1 by PXRD analyses..	5
Table S1. Selected bond lengths (Å) for the {Cu(cyclam)} ²⁺ complexes in 1 , 2 and 2h and their continuous shape measurement values (CShM) compared with those corresponding to ideal polyhedra.	6
Figure S8. A) Detail of N–H···O _{POM} (dashed red lines) and C–H···O _{POM} (dashed green lines) type hydrogen-bonds involved in the stacking of the layers. B) Representation of solvent accessible cavities along the crystallographic y axis.....	7
Table S2. Occupation factors of copper(II) (%Cu) for all the W positions of monosubstituted Keggin-type POMs in 1 , 2 and 2h	7
Figure S10. Scheme of the hydration process that takes place from 2 to 2h with detail of the structural location of water molecules.	8
Figure S11. PXRD diffraction pattern of 1 dehydrated under vacuum and that simulated for 2 from scXRD data.....	8

{SiW₁₁O₃₉Cu(H₂O)}				cyclam			
A	$\nu_{as}(\text{Si}-\text{O}_c) + \nu_{as}(\text{W}-\text{O}_t)_{anti}$	1003	m	a	$\nu(\text{N}-\text{H})$	3180 3094	m
B	$\nu_{as}(\text{W}-\text{O}_t)$	941	m	b	$\nu(\text{C}-\text{H})_{aliphatic}$	2909 2870	m
C	$\nu_{as}(\text{Si}-\text{O}_c) + \nu_{as}(\text{W}-\text{O}_t)_{sim}$	895	f	c	$\nu(\text{C}-\text{C}) + \nu(\text{C}-\text{N})$	1465 1430	f

E	$\nu_{as}(\text{W}-\text{O}_a-\text{W})$	741	h	e	$\nu(\text{N}-\text{C}) + \delta(\text{C}-\text{H})$	1100 1065	m
F	$\nu(\text{Cu}-\text{O})$	678	m				
G	$\delta(\text{W}-\text{O}_a-\text{W})$	532	m				
H	$\delta(\text{W}-\text{O}_v-\text{W})$	440	d				

Figure S1. FT-IR spectrum of 1. Positions and assignments for the most significant signals are provided.

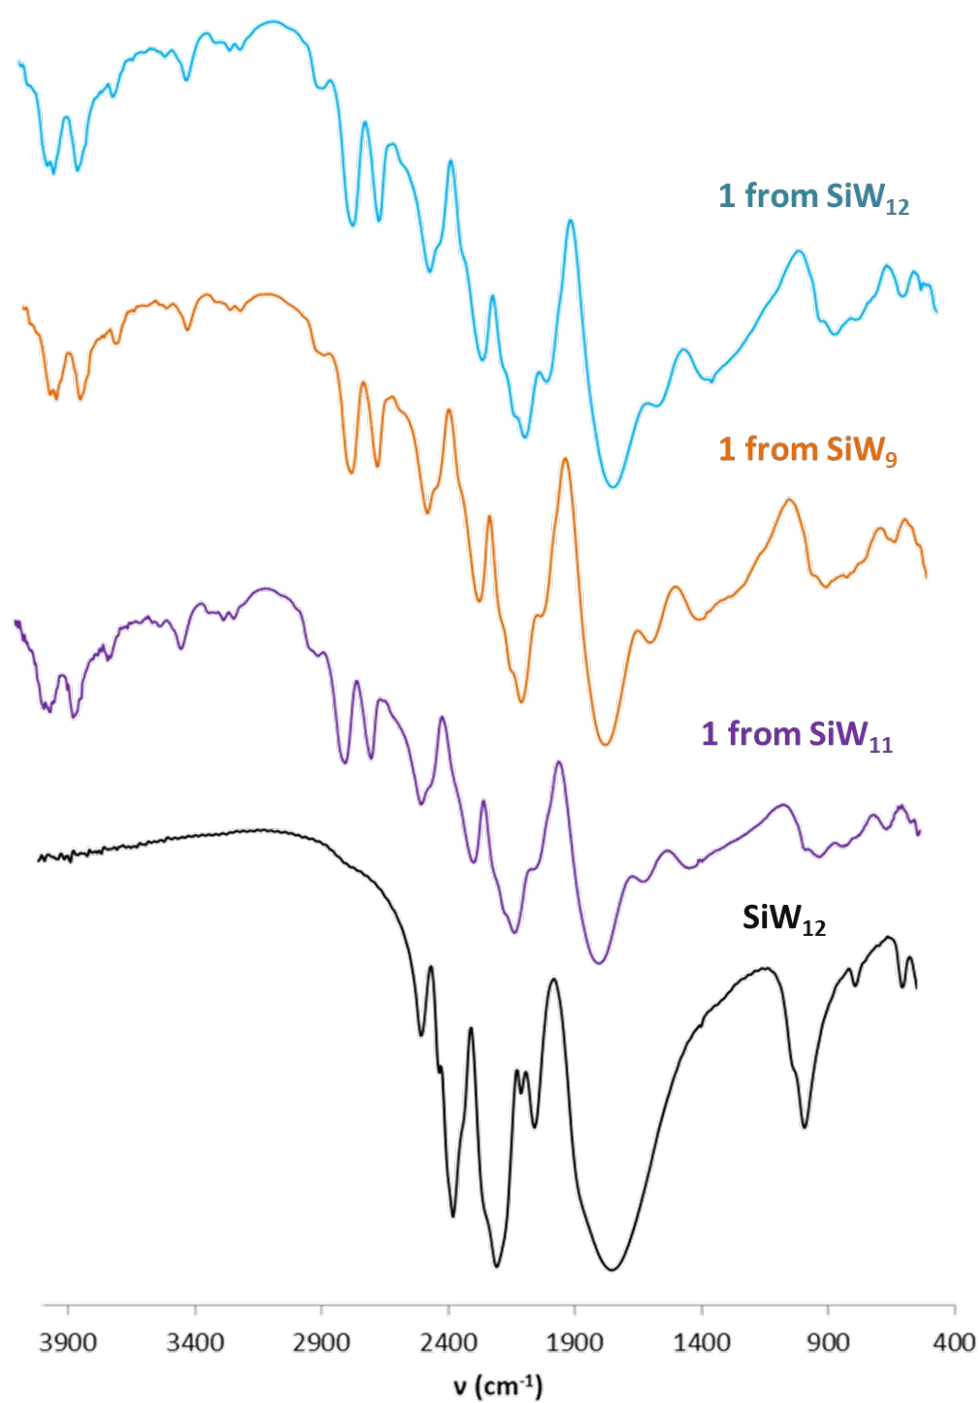

Figure S2. FT-IR spectra of compound **1** obtained from $[\text{SiW}_{12}\text{O}_{40}]^{4-}$ (SiW_{12}), $[\text{SiW}_{11}\text{O}_{39}]^{8-}$ (SiW_{11}) and $[\text{SiW}_9\text{O}_{34}]^{12-}$ (SiW_9) POM precursors and their comparison with the spectrum of the plenary Keggin anion $[\text{SiW}_{12}\text{O}_{40}]^{4-}$.

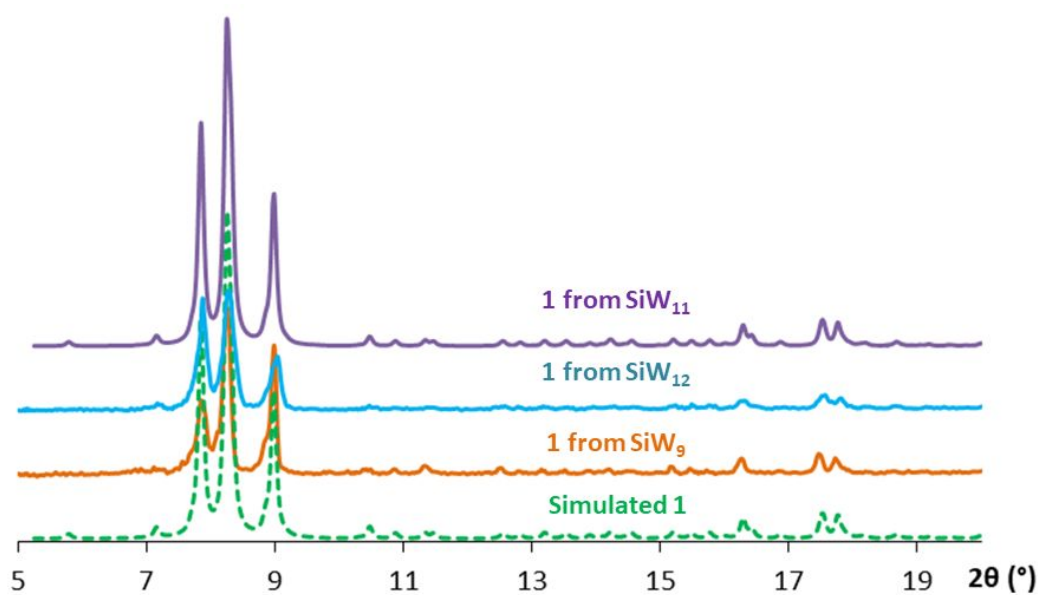

Figure S3. Comparison between the experimental powder X-ray diffraction patterns of **1** obtained from $[\text{SiW}_{12}\text{O}_{40}]^{4-}$ (SiW₁₂), $[\text{SiW}_{11}\text{O}_{39}]^{8-}$ (SiW₁₁) and $[\text{SiW}_9\text{O}_{34}]^{12-}$ (SiW₉) POM precursors and that simulated from single-crystal X-ray diffraction data.

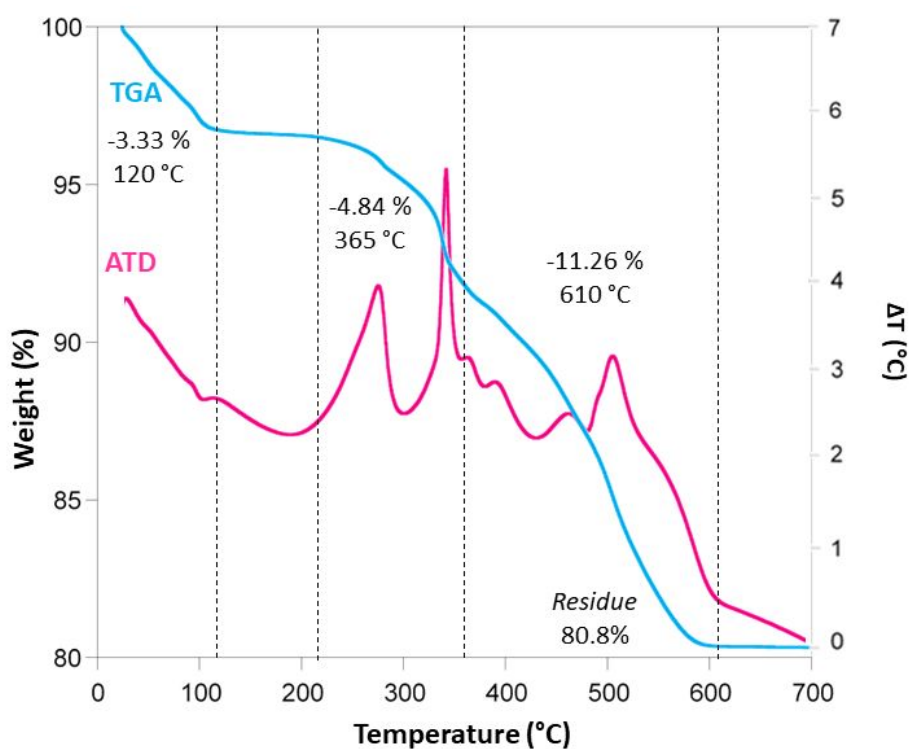

Figure S4. TGA (blue) and DTA (pink) curves of compound **1**.

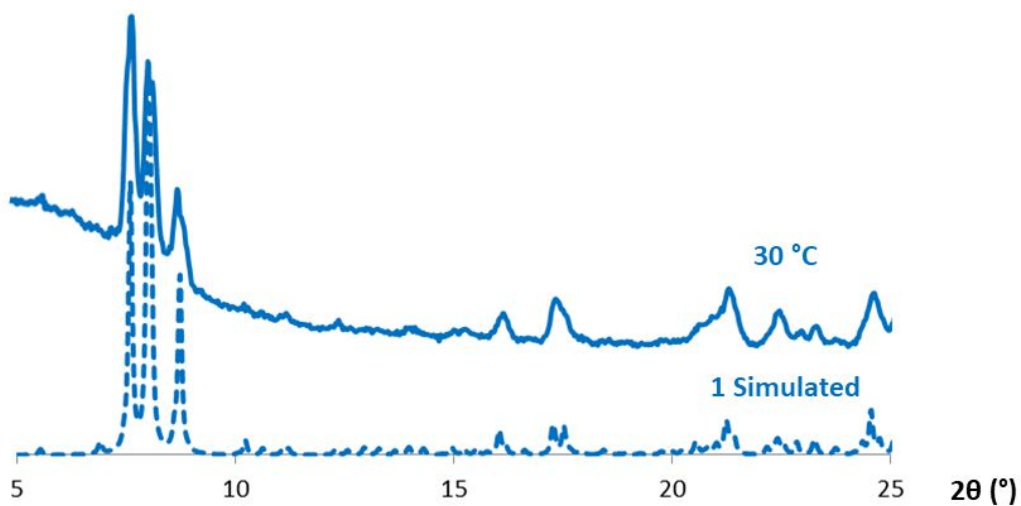

Figure S5. Comparison between the experimental powder X-ray diffraction pattern of **1** at 30 °C and that simulated from single-crystal X-ray diffraction data.

%	Ref. Code	Score	Compound Name	Displacement [°2Th.]	Scale Factor	Chemical Formula
35	01-072-0616	73	Copper Tungsten Oxide	0.017	0.538	CuWO ₄
65	04-007-2426	59	Tungsten Oxide	0.028	1.043	WO ₃

Figure S6. Identification of the final residue from the thermal decomposition of **1** by PXRD analyses.

Table S1. Selected bond lengths (Å) for the {Cu(cyclam)}²⁺ complexes in **1**, **2** and **2h** and their continuous shape measurement values (CShM) compared with those corresponding to ideal polyhedra.
