	<p>This project was proposed by the association to promote the renewable energies in Navarra, APERNA. This project involves the design of a survey and its implementation to a representative sample of students UPNA. Also with this survey I want to know their willingness to pay in a case through the contingent valuation method. This paper starts with an introduction explaining the world energy situation. And continues the explanation of the methodology of the survey. With the results I will assess their level of knowledge about the renewables and also I will do the contingent evaluation. Finally I will comment the conclusions.</p>
