Inglés Ingelesa	Abstract (resumen de 100-250 palabras)		Abstract (laburpena 100-250 hitzetan)		
	<p>The presence of a nurse in classrooms is no longer a utopia, but has now become a reality that happens increasingly in all different educational centres. The change of the schooling model introducing students with specific needs in ordinary schools, the increase of chronic diseases in the childhood, the obesity, the bullying and scholar accidents, are the main reasons why health education is more important than ever. The role of a nurse covers all these aspects, even the ability of providing health education lessons, detecting risk situations and attending the scholar accidents of the proper centre. The implementation of the Scholar Nursery proposed in this Final Degree Project intends to answer those detected necessities in order to contribute to the child welfare and health improvement.</p>				
	<p>KEY WORDS:</p> <p>Scholar nursery, scholar health, healthy living habits, health education, health promotion.</p>
