

Untreated (Control)	0.5 FR	1 FR
		
3 FR	5 FR	7 FR
		

**Supplementary Fig. S1:** Sensitive plants (S) three days after the treatment, indicated as times recommended field rate (FR=0.84 kg ha<sup>-1</sup>). In this preliminary experiment, an initial dose screening was evaluated. Final experiments with sensitive plants were performed with 0.5FR, 1FR, 2 FR and 3FR.

	<b>Untreated S</b>	<b>Untreated R</b>
<b>Shikimate content</b> ( $\mu\text{g disc}^{-1}$ )	$0.73 \pm 0.22$	$0.51 \pm 0.07$
<b>Hydrogen peroxide content</b> (DAB colour intensity) ( $\text{INT mm}^2$ )	$3393 \pm 126$	$10053 \pm 69 *$
<b>Superoxide content</b> (NBT colour intensity) ( $\text{INT mm}^2$ )	$30071 \pm 202$	$33050 \pm 535$
<b>MDA equivalents</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$8.3 \pm 1.4$	$10.4 \pm 1.4$
<b>Carbonyl groups</b> (ADJ. vol) ( $\text{INT OD}^{-1}$ )	$25 \pm 16$	$48 \pm 38$
<b>TEAC (ABTS)</b> ( $\text{mmol kg}^{-1} \text{ FW}$ )	$1.9 \pm 0.3$	$1.41 \pm 0.18$
<b>TEAC (DPPH)</b> ( $\text{mmol kg}^{-1} \text{ FW}$ )	$5.3 \pm 0.8$	$6.5 \pm 0.6$
<b>GSH</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$215 \pm 37$	$188 \pm 30$
<b>GSSG</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$53 \pm 17$	$38.1 \pm 7.6$
<b>Cys</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$8.7 \pm 2.3$	$17.6 \pm 9.6$
<b>GGC</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$6.6 \pm 2.0$	$10.9 \pm 3.4$
<b>Total glutathione</b> ( $\text{nmol g}^{-1} \text{ FW}$ )	$268 \pm 49$	$226 \pm 34$
<b>GSH/GSSG</b>	$6.1 \pm 2.4$	$5.3 \pm 1.0$
<b>Ascorbic acid</b> ( $\text{mg g}^{-1} \text{ FW}$ )	$0.49 \pm 0.06$	$0.42 \pm 0.08$
<b>Dehydroascorbate</b> ( $\text{mg g}^{-1} \text{ FW}$ )	$0.049 \pm 0.020$	$0.0273 \pm 0.0065$
<b>Asc. acid + dehydroascorbate</b> ( $\text{mg g}^{-1} \text{ FW}$ )	$0.54 \pm 0.08$	$0.45 \pm 0.09$
<b>Ascorbate/dehydroascorbate</b>	$25 \pm 16$	$19.2 \pm 5.8$
<b>APX activity</b> ( $\text{nmol min}^{-1} \text{ mg}^{-1} \text{ prot.}$ )	$53 \pm 40$	$41 \pm 10$
<b>CAT activity</b> ( $\text{nmol min}^{-1} \text{ mg}^{-1} \text{ prot.}$ )	$14.9 \pm 3.0$	$12.8 \pm 1.7$
<b>GR activity</b> ( $\text{nmol min}^{-1} \text{ mg}^{-1} \text{ prot.}$ )	$11.7 \pm 2.6$	$13.0 \pm 3.0$
<b>POX activity</b> ( $\text{nmol min}^{-1} \text{ mg}^{-1} \text{ prot.}$ )	$62.7 \pm 4.6$	$63.9 \pm 10.2$
<b>SOD activity</b> (units $\text{mg}^{-1} \text{ prot.}$ )	$147 \pm 25$	$273 \pm 114$
<b>CuZnSOD1</b> (ADJ. vol) ( $\text{OD mm}^2$ )	$-1.2 \pm 1.0$	$-2.4 \pm 0.6$
<b>CuZnSOD2</b> (ADJ. vol) ( $\text{OD mm}^2$ )	$-0.7 \pm 0.3$	$-0.8 \pm 0.3$
<b>MnSOD</b> (ADJ. vol) ( $\text{OD mm}^2$ )	$-0.54 \pm 0.13$	$-0.5 \pm 0.3$

**Suppl. Table 1.** Values for *Amaranthus palmeri* untreated sensitive (S) and resistant (R) populations: shikimate content,  $\text{H}_2\text{O}_2$  content,  $\text{O}_2^-$  content, malondialdehyde (MDA) equivalents, carbonyl groups, Trolox Equivalent Antioxidant Capacity (TEAC), reduced glutathione (GSH) content, oxidised glutathione (GSSG) content, cysteine (Cys) content,  $\gamma$ -glutamyl-cysteine (GGC) content, total glutathione content, GSH/GSSG ratio, ascorbic acid content, dehydroascorbate content, the sum of ascorbic acid and dehydroascorbate contents, ascorbic acid to dehydroascorbate ratio, antioxidant enzymes (ascorbate peroxidase (APX), catalase (CAT), glutathione reductase (GR), peroxidases (POX) and superoxide dismutase (SOD)) activities and SOD isoenzymes. Mean  $\pm$  SE (A: n = 3-13). Significant differences between populations are marked with asterisks (Student's t-test, p-value  $\leq 0.05$ ).
